APPENDIX I

NIOSH RECOMMENDATIONS FOR OCCUPATIONAL SAFETY AND HEALTH STANDARDS

Acting under the authority of the Occupational Safety and Health Act of 1970 (Public Law 91-596), the National Institute for Occupational Safety and Health (NIOSH) develops, and periodically revises, recommendations for limits of exposure to potentially hazardous substances or conditions in the workplace. It also recommends appropriate preventive measures designed to reduce or eliminate adverse health effects of these hazards. In formulating these recommendations, NIOSH evaluates all known and available scientific information relevant to the potential hazard. These recommendations are then published and transmitted to the Department of Labor, Occupational Safety and Health Administration (OSHA) for use in promulgating legal standards.

NIOSH recommendations are published in a variety of documents. Criteria Documents specify a NIOSH-Recommended Exposure Limit (REL) and appropriate preventive measures designed to reduce or eliminate adverse health effects. Special Hazard Reviews, Occupational Hazard Assessments, and Technical Guidelines are other types of documents published by NIOSH which complement the Institute's recommendations for standards. These documents provide assessments, from a safety and health standpoint, of specific problems associated with a given agent or hazard, and recommend appropriate control and surveillance methods. Although they do not supplant the more comprehensive Criteria Document, they are prepared in such a way as to assist OSHA in the formulation of regulations. NIOSH also periodically presents testimony before various Congressional committees and at regulatory hearings convened by OSHA. The testimony presented always includes the current NIOSH policy concerning the particular hazard in question.

NIOSH also publishes documents known as Current Intelligence Bulletins (CIB) which review and evaluate emerging information on occupational hazards. These Bulletins are based on rapid evaluation of new and changing information on a particular hazard in light of existing knowledge.

The "NIOSH Recommendations for Occupational Safety and Health Standards" listed in this summary are based on existing NIOSH policy as previously published in any of the forms listed above. The intent of this table is to provide, in rapid-reference form, the most recent NIOSH REL for each potential hazard. The current OSHA permissible exposure limit (PEL) is also presented. Unless otherwise noted in the table, the NIOSH recommendations were originally published in Criteria Documents.

Note to Readers:

Copies of NIOSH publications are generally available from the U.S. Government Printing Office and the National Technical Information Service. Single copies of these publications may be obtained (while the supply lasts) from

Definitions of abbreviations and terms used in this publication:

Action level	the exposure concentration at which certain provisions of the NIOSH recommended standard must be initiated, such as periodic measurements of worker exposure, training of workers, and medical surveillance
CFR	Code of Federal Regulations
CIB	Current Intelligence Bulletin
dbA	decibel, weighted according to the A scale, which approximates the response of the human ear
ECG	electrocardiogram
J/cm^2	joules per square centimeter
ug/m^3	micrograms per cubic meter
mg/m^3	milligrams per cubic meter
mppcf	millions of particles per cubic foot
mW/cm^2	milliwatts per square centimeter
NIOSH	National Institute for Occupational Safety and Health
OSHA	Occupational Safety and Health Administration
PEL	permissible exposure limit (OSHA)
ppb	parts per billion
ppm	parts per million
REL	recommended exposure limit (NIOSH)
(Skin)	potential contribution to overall exposure by the cutaneous route including mucous membranes and eyes
TWA	time-weighted average
WBGT	wet bulb globe temperature

SUMMARY OF OSHA REGULATIONS AND NIOSH RECOMMENDATIONS FOR OCCUPATIONAL SAFETY AND HEALTH STANDARDS, 1985

Potential Hazard +	OSHA Standard	NIOSH Recommendations		
		NIOSH Recommended Exposure Limit(s) *	Health Effect(s) Considered	Comments
2-Acetylaminofluorence (NIOSH testimony at OSHA hearing September 1973)	29 CRF 1910.1014	NIOSH concurs with OSHA standard	Cancer	Stringent workplace controls and medical surveillance required
Acetylene (July 1976)	2,500 ppm (10% of lower explosive limit)	No exposure >2,500 ppm (2,662 mg/m^3)	Asphyxia	Employers to check for and inform workers of contaminants such as arsine and phosphine
Acrylamide (October 1976)	0.3 mg/m^3, 8-hr TWA (Skin)	0.3 mg/m^3 TWA	Skin, eye, and nervous system effects	Skin and eye contact to be prevented
Acrylonitrile (September 1977; revised March 1978 as part of NIOSH testimony at OSHA hearing)	2 ppm, 8-hr TWA; 10 ppm ceiling (15 min) (Skin)	1 ppm, 8-hr TWA; 10 ppm ceiling (15 min) (Skin)	Brain tumors; lung and bowel cancer	Chest x ray required; first-aid and medical kits to be available during use; skin contact should be prevented
Aldrin/dieldrin (Special Hazard Review September 1978)	0.25 mg/m^3, 8-hr TWA (Skin)	Lowest reliably detectable level; 0.15 mg/m^3 TWA by NIOSH-validated method	Cancer	Aldrin/dieldrin no longer produced in U.S.; skin contact to be prevented
Alkanes (C5-C8) (March 1977)	Pentane: 1,000 ppm (2,950 mg/m^3); n-hexane: 500 ppm (1,800 mg/m^3); n-heptane: 500 ppm (2,000 mg/m^3); octane: 500 ppm (2,350 mg/m^3), 8-hr TWA	All are TWA values: Pentane: 120 ppm (350 mg/m^3); hexane: 100 ppm (350 mg/m^3); heptane: 85 ppm (350 mg/m^3); octane: 75 ppm (350 mg/m^3) mixtures not to exceed 350 mg/m^3 TWA; All are ceiling values (15 min) singly or mixtures: pentane: 610 ppm (1,800 mg/m^3); hexane: 510 ppm (1,800 mg/m^3); heptane: 440 ppm (1,800 mg/m^3); octane: 385 ppm (1,800 mg/m^3)	Skin and nervous system effects	Action level defined as 200 mg/m^3 for these substances
Allyl chloride (September 1976)	1 ppm (3 mg/m^3), 8-hr TWA	1 ppm (3.1 mg/m^3) TWA; 3 ppm (9.3 mg/m^3) ceiling (15 min)	Liver, kidney, and lung effects	Urine, blood, and pulmonary function testing required
4-Aminodiphenyl (NIOSH testimony at OSHA hearing September 1973)	29 CFR 1910.1011	NIOSH concurs with OSHA standard	Cancer	Stringent workplace controls and medical surveillance required

+ Date recommendation was transmitted to OSHA is in parentheses.
* NIOSH TWA recommendations are based on exposures up to 10 hours unless otherwise noted.

Potential Hazard +	OSHA Standard	NIOSH Recommendations		
		NIOSH Recommended Exposure Limit(s) *	Health Effect(s) Considered	Comments
Ammonia (July 1974)	50 ppm (35 mg/m^3), 8-hr TWA	50 ppm (34.8 mg/m^3) ceiling (5 min)	Respiratory irritation	Eye contact should be prevented
Animal rendering processes (Occupational Hazard Assessment March 1981)	Existing OSHA PEL's or NIOSH REL's for specific hazards are applicable		Mechanical injury; burns; heat stress; infections from biologic agents; chemical hazards	Guidelines for engineering controls and work practices to reduce injury and illness presented
Antimony (September 1978)	0.5 mg/m^3, 8-hr TWA	0.5 mg/m^3 TWA	Irritation; heart and lung effects	Chest x ray, pulmonary function testing, and electrocardiogram required
Arsenic, inorganic (September 1974; revised June 1975; reaffirmed July 1982 as part of NIOSH testimony at OSHA hearing)	10 ug/m^3, 8-hr TWA	2 ug As/m^3 ceiling (15 min)	Lung and lymphatic cancer; dermatitis	Chest x ray required
Arsine (CIB August 1979)	0.2 mg/m^3 (0.05 ppm), 8-hr TWA	2 ug As/m^3 ceiling (15 min)	Sudden extensive hemolysis	Workers to be warned of working with arsenic compounds in presence of freshly formed hydrogen
Asbestos (January 1972; revised September 1976; revised March 1984 as part of NIOSH testimony at Congressional hearing; reaffirmed June 1984 as NIOSH testimony at OSHA hearing)	2 million fibers/m^3, over 5 um in length, 8-hr TWA; 10 million fibers/m^3 ceiling	100,000 fibers/m^3, over 5 um in length, 8-hr TWA in a 400 liter air sample	Asbestosis; lung cancer; mesothelioma	None
Asphalt fumes (September 1977)	See Coal-tar products	5 mg/m^3 ceiling measured as total particulate (15 min)	Eye and respiratory irritation	Medical surveillance required; skin contact to be prevented
Benzene (July 1974; revised August 1976; revised July 1977 as part of NIOSH testimony at OSHA hearing)	10 ppm, 8-hr TWA; 25 ppm acceptable ceiling; 50 ppm maximum ceiling (10 min)	1 ppm (3.2 mg/m^3) ceiling (60 min)	Blood changes including leukemia	Blood testing required
Benzidine (NIOSH testimony at OSHA hearing September 1973)	29 CFR 1910.1010	NIOSH concurs with OSHA standard	Cancer	Stringent workplace controls and medical surveillance required

+ Date recommendation was transmitted to OSHA is in parentheses.

* NIOSH TWA recommendations are based on exposures up to 10 hours unless otherwise noted.

Potential Hazard +	OSHA Standard	NIOSH Recommendations		
		NIOSH Recommended Exposure Limit(s) *	Health Effect(s) Considered	Comments
Benzidine-based dyes (Special Hazard Review November 1979; reaffirmed January 1983)	Not controlled as such	Reduce exposure to lowest feasible level; replace with less toxic materials	Cancer	Urine monitoring suggested
Benzoyl peroxide (June 1977)	5 mg/m^3, 8-hr TWA	5 mg/m^3 TWA	Respiratory and eye irritation; skin effects	None
Benzyl chloride (August 1978)	5 mg/m^3 (1 ppm), 8-hr TWA	5 mg/m^3 ceiling (15 min)	Irritation; skin and eye effects	Chest x ray and pulmonary function testing required
Beryllium (June 1972; revised August 1977 as part of NIOSH testimony at OSHA hearing)	2 ug/m^3, 8-hr TWA; 5 ug/m^3 acceptable ceiling; 25 ug/m^3 maximum ceiling (30 min)	Not to exceed 0.5 ug/m^3	Lung cancer	Pulmonary function testing, chest x ray, and sputum cytology required
Boron trifluoride (December 1976)	1 ppm (3 mg/m^3) ceiling	No exposure limit recommended due to the absence of a reliable monitoring method	Respiratory effects	Appropriate engineering and work-practice controls to reduce exposure to lowest feasible level; pulmonary function testing required
1,3-Butadiene (CIB February 1984)	1,000 ppm (2,200 mg/m^3), 8-hr TWA	Reduce exposure to lowest feasible level	Cancer; teratogenicity; reproductive effects	Appropriate engineering and work-practice controls; restrict access to areas where 1,3-butadiene is used
Cadmium (August 1976; revised in CIB September 1984)	Fume: 0.1 mg/m^3, 8-hr TWA; 0.3 mg/m^3 ceiling; dust: 0.2 mg/m^3, 8-hr TWA; 0.6 mg/m^3 ceiling	Reduce exposure to lowest feasible level	Lung cancer	None
Carbaryl (September 1976)	5 mg/m^3, 8-hr TWA	5 mg/m^3 TWA	Central nervous system and reproductive system effects	Workers to be warned of possible effects on reproductive system and to have only minimum exposure during pregnancy; skin and eye contact to be prevented
Carbon black (September 1978)	3.5 mg/m^3, 8-hr TWA	3.5 mg/m^3 TWA; 0.1 mg/m^3 TWA in presence of polycyclic aromatic hydrocarbons	Lung, heart, and skin effects; cancer	Chest x rays, pulmonary function testing, ECG, and sputum cytology required
Carbon dioxide (August 1976)	5,000 ppm (9,000 mg/m^3), 8-hr TWA	10,000 ppm (18,000 mg/m^3) TWA; 30,000 ppm (54,000 mg/m^3) ceiling (10 min)	Respiratory effects	None

+ Date recommendation was transmitted to OSHA is in parentheses.
* NIOSH TWA recommendations are based on exposures up to 10 hours unless otherwise noted.

Potential Hazard +	OSHA Standard	NIOSH Recommendations		
		NIOSH Recommended Exposure Limit(s) *	Health Effect(s) Considered	Comments
Carbon disulfide (May 1977)	20 ppm, 8-hr TWA; 30 ppm acceptable ceiling; 100 ppm maximum ceiling (30 min)	1 ppm (3 mg/m^3) TWA; 10 ppm (30 mg/m^3) ceiling (15 min)	Heart, central nervous system, and reproductive system effects	Workers to be advised of potential effects on reproductive system
Carbon monoxide (August 1972)	50 ppm (55 mg/m^3), 8-hr TWA	35 ppm (40 mg/m^3), 8-hr TWA; 200 ppm (229 mg/m^3) ceiling (No minimum time)	Heart effects	None
Carbon tetrachloride (December 1975; revised June 1976)	10 ppm, 8-hr TWA; 25 ppm acceptable ceiling; 200 ppm maximum ceiling (5 min in 4 hr)	2 ppm (12.6 mg/m^3) ceiling 45 liter sample (60 min)	Liver cancer	Recommended standard based on lower limit of detection
Chlorine (May 1976)	1 ppm (3 mg/m^3) ceiling	0.5 ppm (1.45 mg/m^3) ceiling (15 min)	Eye and respiratory irritation	Chest x rays required
Chloroform (September 1974; revised June 1976)	50 ppm (240 mg/m^3) ceiling	2 ppm (9.78 mg/m^3) ceiling 45 liter sample (60 min)	Liver or kidney tumors and central nervous system effects	None
bis-Chloromethyl ether (NIOSH testimony at OSHA hearing September 1973)	29 CFR 1910.1008	NIOSH concurs with OSHA standard	Cancer	Stringent workplace controls and medical surveillance required
Chloromethyl methyl ether (see methyl chloromethyl ether)				
Chloroprene (August 1977)	25 ppm (90 mg/m^3), 8-hr TWA	1 ppm (3.6 mg/m^3) ceiling (15 min)	Reproductive effects; potential for cancer	Chest x ray and pulmonary functio testing required; pregnant worker to be counseled about continuing work with chloroprene
Chromic acid (July 1973; revised--See Chromium December 1975)	1 mg/10 m^3 ceiling	25 ug/m^3 TWA; 50 ug/m^3 ceiling (15 min) as noncarcinogenic Cr (VI)	Nasal ulceration	None
Chromium (VI) (December 1975)	100 ug chromates/m^3 ceiling	Carcinogenic Cr (VI): 1 ug/m^3 TWA; other Cr (VI): 25 ug/m^3 TWA; 50 ug/m^3 ceiling (15 min)	Lung cancer; skin ulcers; and lung irritation	Employer must demonstrate absence of carcinogenic Cr (VI); x ray required
Chrysene (Special Hazard Review June 1978)	None	To be controlled as an occupational carcinogen	Cancer	Document also contains control recommendations for polycyclic aromatic hydrocarbons

+ Date recommendation was transmitted to OSHA is in parentheses.

* NIOSH TWA recommendations are based on exposures up to 10 hours unless otherwise noted.

Potential Hazard +	OSHA Standard	NIOSH Recommendations		
		NIOSH Recommended Exposure Limit(s) *	Health Effect(s) Considered	Comments
Coal gasification plants (September 1978)	OSHA PEL's or NIOSH REL's for specific hazards are applicable		Various effects depending on substances present; carcinogenic potential	Extensive work-practice and control procedures recommended
Coal liquefaction, volumes I and II (Occupational Hazard Assessment June 1981)	OSHA PEL's or NIOSH REL's for specific hazards are applicable		Various effects depending on substances present; carcinogenic potential	Extensive work-practice and control procedures recommended
Coal-tar products (September 1977)	0.2 mg/m^3, 8-hr TWA (benzene-soluble fraction)	0.1 mg/m^3 TWA (cyclohexane-extractable fraction)	Lung and skin cancer	Includes coal tar, creosote, and coal-tar pitch; pulmonary function testing and chest x rays required
Cobalt (Occupational Hazard Assessment November 1981)	0.1 mg/m^3, 8-hr TWA	NIOSH has concluded that there is insufficient evidence to warrant recommending a new exposure limit	Dermatitis; potential for pulmonary fibrosis	Includes recommendations for engineering controls, work practices, protective equipment, worker education, monitoring, and medical surveillance
Coke oven emissions (February 1973; revised November 1975 as part of NIOSH testimony at OSHA hearing)	150 ug/m^3, 8-hr TWA	0.5-0.7 mg/m^3 (total particulates) as screening level	Lung cancer	Sputum cytology and chest x ray required; work practices to minimize exposure to emissions
Confined spaces, working in (December 1979)	Covered under numerous OSHA regulations for General Industry (29 CFR 1910)	Various recommendations including a permit system to prevent worker injury and death	Injury and death	None
Cotton dust (September 1974; reaffirmed September 1983 as part of NIOSH testimony at OSHA hearing)	Yarn manufacturing: 200 ug/m^3, 8-hr TWA; slashing and weaving operations: 750 ug/m^3, 8-hr TWA; all other operations: 500 ug/m^3, 8-hr TWA	200 ug/m^3 lint-free cotton dust	Pulmonary disease (byssinosis)	Pulmonary function testing required
Cresol (February 1978)	5 ppm (22 mg/m^3), 8-hr TWA (Skin)	2.3 ppm (10 mg/m^3) TWA	Skin, liver, kidney, and pancreas effects	Applies to mixtures of cresols and cresylic acid; skin and eye contact to be prevented; possible delayed effects
Cyanide, hydrogen and cyanide salts (March 1977)	Hydrogen cyanide: 10 ppm (11 mg/m^3), 8-hr TWA (Skin); cyanide: 5 mg CN/m^3, 8-hr TWA (Skin)	4.7 ppm (5 mg CN/m^3) ceiling (10 min)	Thyroid; blood; respiratory system effects	Concurrent measurement required for HCN when measuring for cyanide salt; trained first-aid personnel and first-aid kits to be available during use; skin and eye contact to be prevented

+ Date recommendation was transmitted to OSHA is in parentheses.
* NIOSH TWA recommendations are based on exposures up to 10 hours unless otherwise noted.

Potential Hazard +	OSHA Standard	NIOSH Recommendations NIOSH Recommended Exposure Limit(s) *	Health Effect(s) Considered	Comments
DDT (Special Hazard Review September 1978)	1 mg/m^3, 8-hr TWA (Skin)	Lowest reliably detectable level; 0.5 mg/m^3 TWA by NIOSH-validated method	Cancer	Skin contact to be prevented
2,4-Diaminoanisole and its salts (CIB January 1978)	None	Reduce exposure to lowest feasible level	Cancer	Skin contact to be prevented; engineering and work-practice controls are recommended
Dibromochloropropane (September 1977)	1 ppb, 8-hr TWA; eye and skin contact to be avoided	10 ppb (0.1 mg/m^3) TWA	Sterility; renal and liver effects	Workers to be warned of reproductive system abnormalities, including sterility
3,3'-Dichlorobenzidine (NIOSH testimony at OSHA hearing September 1973)	29 CFR 1910.1007	NIOSH concurs with OSHA	Cancer	Stringent workplace controls and medical surveillance required
Di-2-Ethylhexyl phthalate (DEHP) (Special Hazard Review March 1983)	5 mg/m^3, 8-hr TWA	Reduce exposure to lowest feasible level	Cancer	DEHP, widely used in the quantitative fit testing of respirators, should be replaced with less toxic material such as refined corn oil
Diisocyanates (September 1978)	Toluene diisocyanate (TDI): 0.02 ppm (0.14 mg/m^3) ceiling; diphenylmethane diisocyanate (MDI): 0.02 ppm (0.2 mg/m^3) ceiling	Each equivalent to 5 ppb TWA and 20 ppb ceiling. All values given in ug/m^3 and all ceiling values for 10 min: TDI: 35 TWA, 140 ceiling; MDI: 50 TWA, 200 ceiling; hexamethylene diisocyanate (HDI): 35 TWA, 140 ceiling; naphthalene diisocyanate (NDI): 40 TWA, 170 ceiling; isophorone diisocyanate (IPDI): 45 TWA, 180 ceiling; dicyclohexylmethane 4,4'-diisocyanate (hydrogenated MDI): 55 TWA, 210 ceiling; other diisocyantes also to be controlled to 20 ppb ceiling and 5 ppb TWA	Respiratory effects and sensitization; irritation	Chest x ray and pulmonary function testing required
4-Dimethylaminoazobenzene (NIOSH testimony at OSHA hearing September 1973)	29 CRF 1910.1015	NIOSH concurs with OSHA standard	Cancer	Stringent workplace controls and medical surveillance required
Dinitro-ortho-cresol (February 1978)	0.2 mg/m^3, 8-hr TWA (Skin)	0.2 mg/m^3 TWA	Central nervous system and metabolic effects	Blood and urine monitoring required; skin and eye contact should be prevented; possible delayed effects

+ Date recommendation was transmitted to OSHA is in parentheses.

* NIOSH TWA recommendations are based on exposures up to 10 hours unless otherwise noted.

Potential Hazard +	OSHA Standard	NIOSH Recommendations		
		NIOSH Recommended Exposure Limit(s) *	Health Effect(s) Considered	Comments
Dinitrotoluene (CIB July 1985)	1.5 mg/m^3, 8-hr TWA (Skin)	Reduce exposure to lowest feasible level	Cancer; potential for reproductive effects	Skin contact to be prevented
Dioxane (September 1977)	100 ppm (360 mg/m^3), 8-hr TWA (Skin)	1 ppm (3.6 mg/m^3) ceiling (30 min)	Cancer; liver and kidney effects	Blood and urine testing required; skin contact should be prevented
Dioxin (CIB January 1984)	None	Reduce exposure to lowest feasible level	Cancer; chloracne	None
Elevated workstations, emergency egress from (December 1975)	Sections under Subpart E, Means of Egress, General Industry Standards, and Subpart R, Special Industries (29 CFR 1910.261)	Various recommendations concerning means and availability of egress	Trauma and injury	None
Epichlorohydrin (September 1976; revised in CIB October 1978)	5 ppm (19 mg/m^3), 8-hr TWA	Minimize occupational exposure	Cancer; mutagenesis; reproductive effects; skin, kidney, liver, and respiratory effects	Skin contact should be prevented
Ethylene dibromide (August 1977; revised November 1983; reaffirmed February 1984 as part of NIOSH testimony at OSHA hearing)	20 ppm, 8-hr TWA; 30 ppm acceptable ceiling; 50 ppm maximum peak (5 min)	0.045 ppm (0.38 mg/m^3), 8-hr TWA; 0.13 ppm (1 mg/m^3) ceiling (15 min)	Cancer; mutagenesis; damage to skin, eyes, heart, liver, spleen, and respiratory and central nervous systems	Workers to be warned of potential reproductive abnormalities and cancer; hazardous liquid; contact to be prevented
Ethylene dichloride March 1976; revised CIB April 1978; revised September 1978)	50 ppm, 8-hr TWA; 100 ppm acceptable ceiling; 200 ppm maximum ceiling (5 min in 3 hr)	1 ppm (4 mg/m^3) TWA; 2 ppm (8 mg/m^3) ceiling (15 min)	Cancer; nervous system, respiratory, heart, and liver effects	Nursing infants of exposed mothers at risk
Ethyleneimine (NIOSH testimony at OSHA hearing September 1973)	0.5 ppm (1 mg/m^3), 8-hr TWA (skin) 29 CFR 1910.1012	NIOSH concurs with 29 CFR 1910.1012	Cancer	Stringent workplace controls and medical surveillance required
Ethylene oxide (Special Hazard Review September 1977; revised July 1983 as part of NIOSH testimony at OSHA hearing)	1 ppm (1.8 mg/m^3), 8-hr TWA	<0.1 ppm (0.18 mg/m^3), 8-hr TWA; 5 ppm (9 mg/m^3) ceiling (10 min/day)	Cancer; mutagenesis; reproductive effects	Blood monitoring and medical counseling recommended
Ethylene thiourea (Special Hazard Review October 1978)	None	Should be used in encapsulated form in industry; worker exposure to be minimized	Carcinogenesis and teratogenesis	Workers to be informed of carcinogenic and teratogenic hazards; special attention to be

+ Date recommendation was transmitted to OSHA is in parentheses.

* NIOSH TWA recommendations are based on exposures up to 10 hours unless otherwise noted.

Potential Hazard +	OSHA Standard	NIOSH Recommendations		
		NIOSH Recommended Exposure Limit(s) *	Health Effect(s) Considered	Comments
Excavation, development of draft construction safety standards for (Technical Guideline May 1983)	Many aspects covered under OSHA regulations governing excavations, trenching, and shoring practices in the construction industry (29 CFR 1926, Subpart P)	Many work-practice recommendations concerning safety standards excavations	Injury and death	None
Fibrous glass (April 1977)	15 mg/m^3 total dust; 5 mg/m^3 respirable fraction (nuisance dust)	3 million fibers/m^3 TWA (fibers $\leq$3.5 um diameter and >10 $\overline{\mu m}$ length); 5 mg/m^3 TWA (total fibrous glass)	Eye, skin, and respiratory effects	NIOSH recommends that this limit also apply to other manmade fibers
Fluorides, inorganic (June 1975)	2.5 mg/m^3, 8-hr TWA	2.5 mg F/m^3 TWA	Kidney and bone effects	Urine monitoring required
Fluorocarbon polymers, decomposition products (September 1977)	None	Various recommendations emphasizing good work practices, engineering controls, and medical management	Lung effects; polymer fume fever	Workroom air to be monitored for inorganic fluorides and hydrogen fluoride
Formaldehyde (December 1976; revised in CIB April 1981)	3 ppm, 8-hr TWA; 5 ppm acceptable ceiling; 10 ppm maximum ceiling (30 min)	Minimize workplace exposure levels; limit exposure to lowest feasible level	Cancer	Medical surveillance; skin protection
Furfuryl alcohol (March 1979)	50 ppm (200 mg/m^3), 8-hr TWA	50 ppm (200 mg/m^3) TWA	Respiratory effects	None
Glycidyl ethers (June 1978; revised in CIB October 1978)	All values in ppm (mg/m^3): allyl glycidyl ether (AGE): 10 (45) ceiling; n-butyl glycidyl ether (BGE): 50 (270), 8-hr TWA; di-2,3-epoxypropyl ether (DGE): 0.5 (2.8), 8-hr TWA; isopropyl glycidyl ether (IGE): 50 (240), 8-hr TWA; phenyl glycidyl ether (PGE): 10 (60), 8-hr TWA	All are ceiling values (15 min) in ppm (mg/m^3): AGE: 9.6 (45) BGE: 4.4 (30) DGE: 0.2 (1) IGE: 50 (240) PGE: 1 (5)	Cancer for DGE; skin and mucous membrane effects; sensitization potential; tumorigenesis and mutagenesis; possible hemopoietic and reproductive effects	Possible additive effects with mixtures; medical surveillance
Glycol ethers (CIB May 1983)	2-Methoxyethanol: 25 ppm (80 mg/m^3), 8-hr TWA (Skin); 2-Ethoxyethanol: 200 ppm (740 mg/m^3), 8-hr TWA (Skin)	Reduce exposure to lowest feasible level	Reproductive effects; teratogenicity	Skin contact to be prevented

given to thyroid function tests

+ Date recommendation was transmitted to OSHA is in parentheses.
* NIOSH TWA recommendations are based on exposures up to 10 hours unless otherwise noted.

Potential Hazard +	OSHA Standard	NIOSH Recommendations		
		NIOSH Recommended Exposure Limit(s) *	Health Effect(s) Considered	Comments
Grain elevators and feed mills, occupational safety in (Technical Guideline September 1983; reaffirmed June 1984 as part of NIOSH testimony at OSHA hearing)	Many general aspects (e.g., protective equipment, dust control, etc.) covered under the numerous OSHA regulations for General Industry (29 CFR 1910)	Various recommendations for control of combustible dusts and ignition sources, machine guarding, isolation and lock-outs, bin entry, training, and personal protective equipment	Injury and death	Health hazards from exposure to fumigants, pesticides, and grain dust
Hexachloroethane (CIB August 1978)	1 ppm (10 mg/m^3), 8-hr TWA (Skin)	Reduce exposure to lowest feasible level	Cancer	None
Hot environments (June 1972)	None	Action levels: 79°F WBGT (men) 76°F WBGT (women); sliding-scale limits for unimpaired mental function	Heat-induced illnesses	Recommendations include acclimatization, strict work practices, and protective equipment
Hydrazines (June 1978)	All values in ppm (mg/m^3): hydrazine: 1 (1.3), 8-hr TWA; 1,1-dimethylhydrazine: 0.5 (1.0), 8-hr TWA; phenylhydrazine: 5 (22), 8-hr TWA; methylhydrazine: 0.2 (0.35) ceiling	All are ceiling values (120 min) in ppm (mg/m^3): hydrazine: 0.03 (0.04); 1,1-dimethylhydrazine: 0.06 (0.15); phenylhydrazine: 0.14 (0.6); methylhydrazine: 0.04 (0.08)	Liver, blood, eye, and skin effects; cancer	Blood and urine monitoring and chest x ray required; bowel examination for some workers
Hydrogen fluoride (March 1976)	3 ppm, 8-hr TWA	3 ppm (2.5 mg F/m^3) TWA; 6 ppm (5.0 mg F/m^3) ceiling (15 min)	Skin, eye, and airway irritation; bone effects	Pelvic x ray (male workers only) and urine testing required
Hydrogen sulfide (May 1977)	20 ppm acceptable ceiling; 50 ppm maximum ceiling (10 min)	10 ppm (15 mg/m^3) ceiling (10 min)	Irritation; severe acute effects involving nervous and respiratory systems	Continuous monitoring required if potential exists for exposure to ≥ 70 mg/m^3; evacuation required at this level
Hydroquinone (April 1978)	2 mg/m^3, 8-hr TWA	0.44 ppm (2 mg/m^3) ceiling (15 min)	Eye and skin effects	Special provisions for darkroom use
Identification system for occupationally hazardous materials (December 1974)	Sections of Hazard Communication and Carcinogen Standards may be applicable	Complete designation system for occupationally hazardous materials	None	Includes definition, safety data sheets, alert symbols, and label statements
Isopropyl alcohol (March 1976)	400 ppm (980 mg/m^3), 8-hr TWA	400 ppm (984 mg/m^3) TWA; 800 ppm (1,968 mg/m^3) ceiling (15 min)	Mucous membrane irritation; possible cancer threat in manufacturing process	More stringent work practices and medical surveillance for manufacturing workers required
Kepone (January 1976)	None	1 $\mu g/m^3$ TWA	Nervous system effects; liver cancer	Liver function testing required

+ Date recommendation was transmitted to OSHA is in parentheses.

* NIOSH TWA recommendations are based on exposures up to 10 hours unless otherwise noted.

		NIOSH Recommendations		
Potential Hazard +	OSHA Standard	NIOSH Recommended Exposure Limit(s) *	Health Effect(s) Considered	Comments
Ketones (June 1978)	All are 8-hr TWA values in ppm (mg/m^3): acetone: 1,000 (2,400); methyl ethyl ketone: 200 (590); methyl n-propyl ketone: 200 (700); methyl n-butyl ketone: 100 (410); methyl n-amyl ketone: 100 (465); methyl isobutyl ketone: 100 (410); methyl isoamyl ketone: none; diisobutyl ketone: 50 (290); cyclohexanone: 50 (200); mesityl oxide: 25 (100); diacetone alcohol: 50 (240); isophorone: 25 (140)	All are TWA values in ppm (mg/m^3): acetone: 250 (590); methyl ethyl ketone: 200 (590); methyl n-propyl ketone: 150 (530); methyl n-butyl ketone: 1 (4); methyl n-amyl ketone: 100 (465); methyl isobutyl ketone: 50 (200); methyl isoamyl ketone: 50 (230); diisobutyl ketone: 25 (140); cyclohexanone: 25 (100); mesityl oxide: 10 (40); diacetone alcohol: 50 (240); isophorone: 4 (23)	Irritation; liver, kidney, and nervous system effects	Urinalysis required; workers exposed to methyl n-butyl ketone to be warned of nervous system effects
Land-based oil and gas well drilling, comprehensive safety recommendations for (Technical Guideline September 1983; reaffirmed March 1984 as part of NIOSH testimony at OSHA hearing)	Many aspects covered under the numerous OSHA regulations for General Industry (29 CFR 1910)	Various recommendations for safe work practices and technologic improvements	Injury and death	Many tasks, types of equipment, and conditions not covered by existing regulations
Lead, inorganic (January 1973; revised May 1978)	50 ug/m^3, 8-hr TWA; over 8-hr exposure to be determined by formula	<100 ug/m^3 TWA; air level to be maintained so that worker blood lead remains $\leq$60 ug/100g	Kidney, blood, and nervous system effects	Blood monitoring required
Lockout/tagout, guidelines for controlling hazardous energy during maintenance and servicing (Technical Guideline September 1983)	Many aspects covered under OSHA regulations for General Industry (29 CFR 1910) and Construction Standards (29 CFR 1926)	Work-practice recommendations for controlling hazardous energy during maintenance and servicing activities	Injury and death	"Energy" defined in this document as kinetic energy, potential energy, electrical energy, and thermal energy
Logging from felling to first haul (July 1976)	None	Extensive work-practice and personal protection recommendations	Primarily trauma and falls	Immunization and first-aid programs to be instituted
Malathion (June 1976)	15 mg/m^3, 8-hr TWA	15 mg/m^3 TWA	Nervous system effects	Skin contact to be prevented; blood monitoring required
Mercury, inorganic (August 1973)	0.1 mg/m^3 acceptable ceiling	0.05 mg/m^3, 8-hr TWA	Central nervous system and mental effects	Work practices, sanitation, monitoring, and medical surveillance

+ Date recommendation was transmitted to OSHA is in parentheses.

* NIOSH TWA recommendations are based on exposures up to 10 hours unless otherwise noted.

Potential Hazard +	OSHA Standard	NIOSH Recommendations		
		NIOSH Recommended Exposure Limit(s) *	Health Effect(s) Considered	Comments
			emphasized	
Methyl alcohol (March 1976)	200 ppm (260 mg/m^3), 8-hr TWA	200 ppm (262 mg/m^3) TWA; 800 ppm (1,048 mg/m^3) ceiling (15 min)	Blindness; metabolic acidosis	None
Methyl chloromethyl ether (NIOSH testimony at OSHA hearing September 1973)	29 CFR 1910.1006	NIOSH concurs with OSHA standard	Cancer	Stringent workplace controls and medical surveillance required
Methyl parathion (September 1976)	None	0.2 mg/m^3 TWA	Nervous system effects	Skin contact to be prevented; blood monitoring required
4,4'-Methylenebis (2-chloroaniline) (MOCA) (Special Hazard Review September 1973)	Standard formally revoked by OSHA, August 1975	3 $\mu g/m^3$ TWA (lowest detectable level)	Cancer	Chest x ray; blood and urine testing required
Methylene chloride (March 1976)	500 ppm, 8-hr TWA; 1,000 ppm acceptable ceiling; 2,000 ppm acceptable maximum peak for 5 minutes in any 2-hr period above the acceptable ceiling for an 8-hr shift	75 ppm (261 mg/m^3) TWA; 500 ppm (1,740 mg/m^3) ceiling (15 min) to be lowered in presence of carbon monoxide	Central nervous system effects; carbon monoxide toxicity	Blood monitoring required
Monohalomethanes (CIB September 1984)	Methyl chloride: 100 ppm, 8-hr TWA; 200 ppm ceiling; 300 ppm acceptable maximum peak for 5 minutes in any 3-hr period above the acceptable ceiling for an 8-hr shift; methyl bromide: 20 ppm (80 mg/m^3) ceiling (Skin); methyl iodide: 5 ppm (28 mg/m^3), 8-hr TWA (Skin)	Exposure to methyl chloride, methyl bromide, and methyl iodide should be reduced to the lowest feasible level	Cancer; for methyl chloride: cancer and teratogenicity	None
alpha-Naphthylamine (NIOSH testimony at OSHA hearing September 1973)	29 CFR 1910.1004	NIOSH concurs with OSHA standard	Cancer	Stringent workplace controls and medical surveillance required
beta-Naphthylamine (NIOSH testimony at OSHA hearing September 1973)	29 CFR 1910.1009	NIOSH concurs with OSHA standard	Cancer	Stringent workplace controls and medical surveillance required
Niax® Catalyst ESN (Joint NIOSH/OSHA CIB May 1978)	OSHA and NIOSH recommend that exposure to Niax® Catalyst ESN and its components, dimethylaminopropionitrile and bis[2-(dimethylamino)ethyl] ether be minimized		Urological disorders; nervous system effects	Work-practice and engineering controls to reduce exposure

+ Date recommendation was transmitted to OSHA is in parentheses.

* NIOSH TWA recommendations are based on exposures up to 10 hours, unless otherwise noted.

Potential Hazard +	OSHA Standard	NIOSH Recommendations		
		NIOSH Recommended Exposure Limit(s) *	Health Effect(s) Considered	Comments
Nickel carbonyl (Special Hazard Review May 1977)	1 ppb (7 ug/m^3), 8-hr TWA	1 ppb (7 ug/m^3) TWA (least detectable level)	Cancer	Chest x ray, pulmonary function testing, and urine monitoring required
Nickel, inorganic compounds (May 1977)	1 mg/m^3, 8-hr TWA	15 ug Ni/m^3 TWA	Skin effects; lung and nasal cancer	Chest x ray and pulmonary function testing required
Nitric acid (March 1976)	2 ppm (5 mg/m^3), 8-hr TWA	2 ppm (5 mg/m^3) TWA	Dental erosion; nasal/lung irritation	Skin and eye contact to be prevented; chest x ray required
Nitriles (September 1978)	Acetonitrile: 40 ppm (70 mg/m^3), 8-hr TWA; tetramethyl succinonitrile: 0.5 ppm (3 mg/m^3), 8-hr TWA (Skin)	All are TWA values in ppm (mg/m^3): acetonitrile: 20 (34); n-butyronitrile: 8 (22); isobutyronitrile: 8 (22); propionitrile: 6 (14); malononitrile: 3 (8); adiponitrile: 4 (18); succinonitrile: 6 (20). All ceiling values (15 min) in ppm (mg/m^3): acetone cyanohydrin: 1 (4); glycolonitrile: 2 (5); tetramethylsuccinonitrile: 1 (6). When present as mixtures or with other sources of cyanide, exposure to be considered additive and environmental limit to be calculated.	Hepatic, renal, respiratory, cardiovascular, gastrointestinal, and nervous system effects	Chest x ray and pulmonary function testing required; trained personnel and first-aid kits to be available during use; skin and eye contact to be prevented
4-Nitrobiphenyl (NIOSH testimony at OSHA hearing September 1973)	29 CFR 1910.1003	NIOSH concurs with OSHA standard	Cancer	Stringent workplace controls and medical surveillance required
Nitrogen, oxides (March 1976)	NO_2: 5 ppm (9 mg/m^3) ceiling; NO: 25 ppm (30 mg/m^3), 8-hr TWA	NO_2: 1 ppm (1.8 mg/m^3) ceiling (15 min); NO: 25 ppm (30 mg/m^3) TWA	Respiratory effects; blood effects	Pulmonary function testing required
Nitroglycerin and ethylene glycol dinitrate (EGDN) (June 1978)	Nitroglycerin: 2 mg/m^3, (0.2 ppm) ceiling (Skin); EGDN: 1 mg/m^3 (0.2 ppm) ceiling (Skin)	0.1 mg/m^3 ceiling (20 min) recommended limit for either substance alone or mixtures	Circulatory system effects	Skin contact to be prevented

+ Date recommendation was transmitted to OSHA is in parentheses.

* NIOSH TWA recommendations are based on exposures up to 10 hours unless otherwise noted.

		NIOSH Recommendations		
Potential Hazard +	OSHA Standard	NIOSH Recommended Exposure Limit(s) *	Health Effect(s) Considered	Comments
2-Nitronaphthalene (CIB December 1976)	None	Reduce exposure to lowest feasible level	Cancer	Compound metabolizes to beta-naphthylamine, a known carcinogen
2-Nitropropane (CIB April 1977; revised October 1980 in Joint OSHA/NIOSH Health Hazard Alert)	25 ppm (90 mg/m^3), 8-hr TWA	Reduce exposure to lowest feasible level	Cancer	Medical monitoring with specific emphasis on liver function tests
N-Nitrosodimethylamine (NIOSH testimony at OSHA hearing September 1973)	29 CFR 1910.1016	NIOSH concurs with OSHA standard	Cancer	Stringent workplace controls and medical surveillance required
Noise (August 1972)	90 dBA, 8-hr TWA	85 dBA TWA; 115 dBA ceiling	Hearing damage	None
Organotin compounds (November 1976)	0.1 mg tin/m^3, 8-hr TWA	0.1 mg tin/m^3 TWA	Eye, skin, liver, nervous system, and heart effects	Chest x ray, blood and urine monitoring, eye tests, heart examination, and nervous system testing required; skin and eye contact to be prevented
Paint and allied coating products, manufacture of (September 1984)	Many aspects covered under the numerous OSHA regulations for General Industry (29 CFR 1910)	Various recommendations for the handling of raw materials and finished products; dispersion of pigment or resin particles; thinning, tinting, and shading; filling; and laboratory functions	Injury and a wide range of toxicities considered	Paint and allied coating products include paints, varnishes, lacquers, stains, putties, and paint and varnish removers
Parathion (June 1976)	0.1 mg/m^3, 8-hr TWA (Skin)	0.05 mg/m^3 TWA	Nervous system effects	Skin contact to be prevented; blood monitoring required
Pesticide manufacturing and formulation (July 1978)	Current OSHA PEL's or previous NIOSH REL's to be followed; stringent work-practice and medical surveillance requirements to be instituted. Pesticides considered in groups based on toxicity.		Wide range of toxicities considered; nervous and reproductive system effects; cancer	Blood monitoring required for some groups; workers to be warned of reproductive effects for some compounds; skin contact to be prevented
Phenol (July 1976)	5 ppm (19 mg/m^3), 8-hr TWA (Skin)	5.2 ppm (20 mg/m^3) TWA; 15.6 ppm (60 mg/m^3) ceiling (15 min)	Skin, eye, central nervous system, liver, and kidney effects	Skin and eye contact to be prevented
Phenyl-beta-naphthylamine (CIB December 1976)	None	Reduce exposure to lowest feasible level	Cancer	Compound metabolizes to beta-naphthylamine, a known carcinogen

+ Date recommendation was transmitted to OSHA is in parentheses.
* NIOSH TWA recommendations are based on exposures up to 10 hours unless otherwise noted.

Potential Hazard +	OSHA Standard	NIOSH Recommendations		
		NIOSH Recommended Exposure Limit(s) *	Health Effect(s) Considered	Comments
Phosgene (February 1976)	0.1 ppm (0.4 mg/m^3), 8-hr TWA	0.1 ppm (0.4 mg/m^3) TWA; 0.2 ppm (0.8 mg/m^3) ceiling (15 min)	Respiratory effects	Pulmonary function testing and x ray required
Polychlorinated biphenyls (September 1977)	42% chlorine: 1 mg/m^3, 8-hr TWA; 54% chlorine: 0.5 mg/m^3, 8-hr TWA	1 ug/m^3 TWA	Cancer; skin, liver, and reproductive effects	Blood testing required; women workers of child-bearing age and nursing mothers to be warned of potential adverse effects
Precast concrete products industry, comprehensive safety recommendations for (Technical Guideline June 1984)	Many aspects covered under numerous OSHA regulations for General Industry (29 CFR 1910)	Various recommendations for safe work practices and worker training	Injury and death	Equipment, conditions, and many of the tasks specific to the industry are not covered under the existing regulations
beta-Propiolactone (NIOSH testimony at OSHA hearing September 1973)	29 CFR 1910.1013	NIOSH concurs with OSHA standard	Cancer	Stringent workplace controls and medical surveillance required
Refined petroleum solvent (July 1977)	2,900 mg/m^3 (500 ppm), 8-hr TWA (Stoddard solvent)	Kerosene 100 mg/m^3 TWA; all other solvents: 350 mg/m^3 TWA; 1,800 mg/m^3 ceiling (15 min)	Skin, lung, and nerve irritation	Blood and urine monitoring required; action level for petroleum ether, rubber solvent, naphtha: 200 mg/m^3 TWA; action level for mineral spirits and Stoddard solvent: 350 mg/m^3 TWA; action level for kerosene: 100 mg/m^3 TWA; skin contact to be prevented
Silica, crystalline (November 1974)	250/%SiO$_2$+5 in mppcf, or 10 mg/m^3/%SiO$_2$+2 (respirable quartz)	50 ug/m^3 TWA, respirable free silica	Chronic lung disease (silicosis)	X ray, pulmonary function testing required
Sodium hydroxide (September 1975)	2 mg/m^3, 8-hr TWA	2 mg/m^3 ceiling (15 min)	Respiratory irritation	Skin and eye contact to be prevented
Styrene (September 1983)	100 ppm, 8-hr TWA; 200 ppm acceptable ceiling; 600 ppm maximum ceiling (5 min in 3 hr)	50 ppm (213 mg/m^3) TWA; 100 ppm (426 mg/m^3) ceiling	Nervous system effects; eye and respiratory system irritation	Action level set at 25 ppm; skin contact to be prevented; workers to be warned of possible adverse reproductive effects
Sulfur dioxide (February 1974; revised May 1977 as part of NIOSH testimony at OSHA hearing)	5 ppm (13 mg/m^3), 8-hr TWA	0.5 ppm (1.3 mg/m^3) TWA	Respiratory effects	Pulmonary function testing required
Sulfuric acid (June 1974)	1 mg/m^3, 8-hr TWA	1 mg/m^3 TWA	Pulmonary irritation	Skin and eye contact to be prevented

+ Date recommendation was transmitted to OSHA is in parentheses.
* NIOSH TWA recommendations are based on exposures up to 10 hours unless otherwise noted.

Potential Hazard +	OSHA Standard	NIOSH Recommendations		
		NIOSH Recommended Exposure Limit(s) *	Health Effect(s) Considered	Comments
1,1,2,2-Tetrachloroethane (December 1976; revised in CIB August 1978)	5 ppm (35 mg/m^3), 8-hr TWA (Skin)	Reduce exposure to lowest feasible level	Cancer; liver, gastrointestinal, and nervous system effects	Skin contact to be prevented; blood monitoring required
Tetrachloroethylene (July 1976; revised January 1978 in CIB)	100 ppm, 8-hr TWA; 200 ppm acceptable ceiling; 300 ppm maximum ceiling (5 min in 3 hr)	Minimize workplace exposure levels; limit number of workers exposed	Cancer	None
Thiols: n-alkane mono, cyclohexane, and benzene (September 1978)	Butylmercaptan: 10 ppm (35 mg/m^3), 8-hr TWA; ethylmercaptan: 10 ppm (25 mg/m^3) ceiling; methylmercaptan: 10 ppm (20 mg/m^3) ceiling	All values in ppm (mg/m^3), ceilings 15 min: 1-methanethiol: 0.5 (1.0); 1-ethanethiol: 0.5 (1.3); 1-propanethiol: 0.5 (1.6); 1-butanethiol: 0.5 (1.8); 1-pentanethiol: 0.5 (2.1); 1-hexanethiol: 0.5 (2.4); 1-heptanethiol: 0.5 (2.7); 1-octanethiol: 0.5 (3.0); 1-nonanethiol: 0.5 (3.3); 1-decanethiol: 0.5 (3.6); 1-undecanethiol: 0.5 (3.9); 1-dodecanethiol: 0.5 (4.1); 1-hexadecanethiol: 0.5 (5.3); 1-octadecanethiol: 0.5 (5.9); cyclohexanethiol: 0.5 (2.4); benzenethiol: 0.1 (0.5); mixtures of thiols to be controlled by calculation of equivalent concentrations	Irritation; eye, skin, blood, and nervous system effects	Blood and urine monitoring required; skin contact to be prevented
o-Tolidine (August 1978)	None	20 ug/m^3 ceiling (60 min)	Nasal irritation; cancer	Urine testing required; quarterly urine monitoring recommended; skin contact to be prevented
Toluene (January 1974)	200 ppm, 8-hr TWA; 300 ppm acceptable ceiling; 500 ppm maximum ceiling (10 min)	100 ppm (375 mg/m^3), 8-hr TWA; 200 ppm (750 mg/m^3) ceiling (10 min)	Central nervous system depressant	None
Toluene diisocyanate (July 1973; revised - - See Diisocyanates, September 1978)	0.02 ppm (0.14 mg/m^3) ceiling	0.005 ppm (0.036 mg/m^3) TWA; 0.02 ppm (0.14 mg/m^3) ceiling (20 min)	Respiratory effects	Chest x rays, blood tests, pulmonary function testing required
1,1,1-Trichloroethane (July 1976)	350 ppm (1,900 mg/m^3), 8-hr TWA	350 ppm (1,910 mg/m^3) ceiling (15 min)	Nervous system, liver, and heart effects	Action level set at 200 ppm TWA; medical warning of possible congenital abnormalities required

+ Date recommendation was transmitted to OSHA is in parentheses.

* NIOSH TWA recommendations are based on exposures up to 10 hours unless otherwise noted.

Potential Hazard +	OSHA Standard	NIOSH Recommendations		
		NIOSH Recommended Exposure Limit(s) *	Health Effect(s) Considered	Comments
1,1,2-Trichloroethane (CIB August 1978)	10 ppm (45 mg/m^3), 8-hr TWA (Skin)	Reduce exposure to lowest feasible level	Cancer	None
Trichloroethylene (July 1973; revised in Special Hazard Review, February 1978)	100 ppm, 8-hr TWA; 200 ppm acceptable ceiling; 300 ppm maximum ceiling (5 min in 2 hr)	25 ppm TWA	Cancer; central nervous system depressant	Workers to be warned of hazards; 25 ppm level can be achieved by use of existing engineering control technology
Trimellitic anhydride (CIB February 1978)	None	Should be handled in the workplace as an extremely toxic substance	Pulmonary edema; immunological sensitization; irritation of pulmonary tract, eyes, nose, and skin	Limit exposure to as few workers as possible while minimizing workplace levels
Tungsten and cemented tungsten carbide (September 1977)	None	Insoluble tungsten: 5 mg/m^3 TWA; soluble tungsten: 1 mg/m^3 TWA; dust of cemented tungsten carbide (containing >2% cobalt): 0.1 mg cobalt/m^3 TWA; dust of cemented tungsten carbide (containing >0.3% nickel): 15 ug nickel/m^3 TWA	Lung and skin effects	Pulmonary function testing and chest x ray required
Ultraviolet radiation (December 1972)	10 mW/cm^2 averaged over any 0.1-hr period	1.0 mW/cm^2 for periods >1,000 sec; 1,000 mW (1.0 J/cm^2) sec/cm^2 for periods ≤1,000 sec	Skin and eye effects	None
Vanadium (August 1977)	Vanadium pentoxide (dust): 0.5 mg/m^3 ceiling; (fume): 0.1 mg/m^3 ceiling; ferrovanadium: 1 mg/m^3, 8-hr TWA	Vanadium compounds: 0.05 mg/m^3 ceiling (15 min); metallic vanadium and vanadium carbide: 1 mg/m^3 TWA	Eye, skin, and lung effects	Pulmonary function testing and chest x ray required
Vibration syndrome (CIB March 1983)	None	Jobs should be redesigned to minimize the use of vibrating handtools; powered handtools should be redesigned to minimize vibration.	Vibration syndrome; adverse circulatory and neural effects in the fingers	None
Vinyl acetate (September 1978)	None	4 ppm (15 mg/m^3) ceiling (15 min)	Irritation	None
Vinyl chloride (March 1974; reaffirmed June 1974 as part of NIOSH testimony at OSHA hearing)	1 ppm, 8-hr TWA; 5 ppm ceiling (15 min)	Lowest reliably detectable level; air-supplied respirator with auxiliary self-contained air supply to be worn	Liver cancer	Liver function testing required

+ Date recommendation was transmitted to OSHA is in parentheses.

* NIOSH TWA recommendations are based on exposures up to 10 hours unless otherwise noted.

Potential Hazard +	OSHA Standard	NIOSH Recommendations		
		NIOSH Recommended Exposure Limit(s) *	Health Effect(s) Considered	Comments
Vinyl halides (September 1978)	None except for vinyl chloride	Vinyl halides to be controlled as specified for vinyl chloride in 29 CFR 1910.1017 with eventual goal of zero exposure	Cancer	Vinyl halides include vinyl chloride, vinylidene chloride, vinyl bromide, vinyl fluoride, and vinylidene fluoride monomers
Waste anesthetic gases and vapors (May 1977)	None for substances when used as anesthetic agents	Halogenated anesthetic agents: 2 ppm ceiling (1 hr); nitrous oxide: 25 ppm TWA during periods of use	Reproductive effects and audiovisual performance decrements	Workers to be advised of potential effects; abnormal outcome of pregnancies of workers and spouses to be documented
Xylene (May 1975)	100 ppm (435 mg/m^3), 8-hr TWA	100 ppm (434 mg/m^3) TWA; 200 ppm (868 mg/m^3) ceiling (10 min)	Central nervous system depressant; respiratory irritation	None
Zinc oxide (October 1975)	5 mg/m^3, 8-hr TWA	5 mg/m^3 TWA; 15 mg/m^3 ceiling (15 min)	Metal fume fever	None

+ Date recommendation was transmitted to OSHA is in parentheses.

* NIOSH TWA recommendations are based on exposures up to 10 hours unless otherwise noted.

BEST COPY [illegible]

APPENDIX II

NIOSH SAMPLING AND ANALYTICAL METHODS

The NIOSH Manual of Sampling and Analytical Methods, Third Edition, is now available. It has been produced in a loose leaf format so that new methods can be inserted as they become available. In the first printing 102 revised methods, covering over 200 substances, were published. Periodic additions to these original revisions have been added and will continue to be added as they are completed.

Where similarities of sampling and measurement procedures and clarity allowed, the revised methods have been written around groups of substances. The methods are arranged in alphabetical order of method name with separate sections for air, biological, and bulk samples. Chapters on Quality Assurance, Air Sampling, Development and Evaluation of Methods, and Biological Samples are included.

The Manual can be ordered from:

Superintendent of Documents
U. S. Government Printing Office
Washington, D.C. 20402

The subscription price is $31.00, which includes the annual updates.

Specific questions about any of the analytical methods should be directed to the Division of Physical Sciences and Engineering, Manual Coordinator, NIOSH, 4676 Columbia Parkway, Cincinnati, Ohio 45226, telephone (513) 841-4323.

INDEX OF NAMES AND SYNONYMS

The references to method title and number are listed in the following manner:

ACETIC ACID, 1603	(Method title)
Ethanoic acid, see ACETIC ACID, 1603	(Synonym)
Glacial acetic acid, see ACETIC ACID, 1603	(Synonym)
Methane carboxylic acid, see ACETIC ACID, 1603	(Synonym)
CAS #64-19-7, see ACETIC ACID, 1603	(Chemical Abstracts Registry Number)

Acenaphthene, see POLYNUCLEAR AROMATIC HYDROCARBONS (HPLC), 5506; (GC), 5515
Acenaphthylene, see POLYNUCLEAR AROMATIC HYDROCARBONS (HPLC), 5506; (GC), 5515
ACETIC ACID, 1603
Acetic acid anhydride, see ACETIC ANHYDRIDE, 3506
Acetic acid butyl ester, see ESTERS I, 1450
Acetic acid 1,1-dimethylethyl ester, see ESTERS I, 1450
Acetic acid ethylene glycol monoethyl ether ester, see ESTERS I, 1450
Acetic acid isobutyl ester, see ESTERS I, 1450
Acetic acid 3-methyl-1-butanol ester, see ESTERS I, 1450
Acetic acid 4-methyl-2-pentanol ester, see ESTERS I, 1450
Acetic acid 1-methyl propyl ester, see ESTERS I, 1450
Acetic acid 1-pentanol ester, see ESTERS I, 1450
Acetic acid 2-pentanol ester, see ESTERS I, 1450
Acetic acid n-propyl ester, see ESTERS I, 1450
ACETIC ANHYDRIDE, 3506
Acetone, see KETONES I, 1300
ACETONE CYANOHYDRIN, 2506
ACETONITRILE, 1606
3-(a-Acetonylbenzyl)-4-hydroxycoumarin, see WARFARIN, 5002
Acetyl oxide, see ACETIC ANHYDRIDE, 3506

APPENDIX III
NIOSH HEALTH HAZARD EVALUATIONS

BLANK PAGE

REQUESTS FOR HEALTH HAZARD EVALUATIONS

(Code of Federal Regulations, Title 42, Part 85, 37 FR 23640, November 7, 1972; amended at 45 FR 2651, January 14, 1980)

PART 85—REQUESTS FOR HEALTH HAZARD EVALUATIONS

Sec.

85.1 Applicability
85.2 Definitions.
85.3 Procedures for requesting health hazard evaluations.
85.3-1 Contents of a request for health hazard evaluations.
85.4 Acting on requests.
85.5 Authority for investigations.
85.6 Advance notice of visits.
85.7 Conduct of investigations.
85.8 Provision of suitable space for employee interviews and examinations; identification of employees.
85.9 Representatives of employers and employees; employee requests.
85.10 Imminent dangers.
85.11 Notification of determination to employers, affected employees, and Department of Labor.
85.12 Subsequent requests for health hazard evaluations.

AUTHORITY: Sec. 8(g), 84 Stat. 1600; 29 U.S.C. 657(g) and sec. 508, 83 Stat. 803; 30 U.S.C. 957.

SOURCE: 37 FR 23640, Nov. 7, 1972, unless otherwise noted.

§ 85.1 Applicability.

This Part 85 applies to health hazard evaluations requested by any employer or authorized representative of employees under section 20(a)(6) of the Occupational Safety and Health Act of 1970 or section 501(a)(11) of the Federal Mine Safety and Health Act of 1977. This part is not intended to preclude the use of other channels of communication with the National Institute for Occupational Safety and Health to obtain information and technical assistance concerning toxic substances or physical agents.

[45 FR 2652, Jan. 14, 1980]

§ 85.2 Definitions.

Any term defined in the Occupational Safety and Health Act of 1970 or the Federal Mine Safety and Health Act of 1977 and not defined below shall have the meaning given it in the respective Acts. As used in this part:

"OSH Act" means the Occupational Safety and Health Act of 1970 (29 U.S.C. 651, et seq.).

"FMSH Act" means the Federal Mine Safety and Health Act of 1977 (30 U.S.C. 801, et seq.).

"Authorized representative of employees" means any person or organization meeting the conditions specified in § 85.3-1(e) (1), (2), or (3).

"Employee" has the same meaning as stated in the OSH Act and for the purposes of this part includes "miner" as defined in the FMSH Act.

"Employer" has the same meaning as stated in the OSH Act and for the purposes of this part includes "Operator" as defined in the FMSH Act.

"Health hazard evaluation" means the investigation and the determination of potentially toxic or hazardous effects of: (a) any substance normally used or found in any place of employment to which the OSH Act is applicable, or (b) any substance or physical agent normally used or found in any place of employment to which the FMSH Act is applicable.

"Investigation" means a physical inspection of the place of employment under section 8 of the OSH Act or section 103 of the FMSH Act and includes inspection, sampling, observations, review of pertinent records, and other measurements reasonably necessary to determine whether any substance or physical agent found in the place of employment has potentially toxic or hazardous effects in the concentrations or levels used or found.

"NIOSH" means the National Institute for Occupational Safety and Health, Center for Disease Control, Public Health Service, Department of Health and Human Services.

"NIOSH officer" means a NIOSH employee who has been authorized by the Director, NIOSH, to conduct investigations according to this part.

"Physical agent" means any condition produced by the environment and/or work processes that can result in hazardous effects as defined in this section. Examples of physical agents are noise, temperature, illumination, vibration, radiation, and pressure.

"Place of employment" means any coal or other mine, factory, plant, establishment, construction site, or other area, workplace, or environment where work is performed by any employee of an employer.

"Substance" means any chemical or biological agent or dust which has the potential to produce toxic effects.

"Toxic effects" or "hazardous effects" are those effects which result in short- or long-term disease, bodily injury, affect health adversely, or endanger human life.

[45 FR 2652, Jan. 14, 1980]

§ 85.3 Procedures for requesting health hazard evaluations.

(a) Requests for health hazard evaluations should be addressed to the National Institute for Occupational Safety and Health as follows:

(1) *Requests from general industry.* Hazard Evaluations and Technical Assistance Branch, Division of Surveillance, Hazard Evaluations, and Field Studies, NIOSH, 4676 Columbia Parkway, Cincinnati, OH 45226.

(2) *Requests from mining industry.*

Environmental Investigations Branch, Division of Respiratory Disease Studies, NIOSH, 944 Chestnut Ridge Road, Morgantown, WV 26505.

(b) Requests for health hazard evaluations shall be submitted in writing and signed by either: (1) The employer in whose place of employment the substance or physical agent is normally found, or (2) an authorized representative of employees (see § 85.3-1(e)) in the place of employment where the substance or physical agent is normally found.

[45 FR 2653, Jan. 14, 1980]

§ 85.3-1 Contents of a request for health hazard evaluation.

Each request for health hazard evaluation shall contain:

(a) The requester's name, address, and telephone number, if any.

(b) The name and address of the place of employment where the substance or physical agent is normally found.

(c) The specific process or type of work which is the source of the substance or physical agent, or in which the substance or physical agent is used.

(d) Details of the conditions or circumstances which prompted the request.

(e) A statement, if the requester is not the employer, that the requester is:

(1) An authorized representative or an officer of the organization representing the employees for purposes of collective bargaining; or

(2) An employee of the employer and is authorized by two or more employees employed in the same place of employment to represent them for purposes of these Acts (each such authorization shall be in writing and a copy submitted with the request for health hazard evaluation); or

(3) One of three or less employees employed in the place of employment where the substance or physical agent is normally found.

(f) A statement indicating whether or not the name(s) of the requester or those persons who have authorized the requester to represent them may be revealed to the employer by NIOSH.

(g) The following supplementary information if known to the requester:

(1) Identity of each substance or physical agent involved;

(2) The trade name, chemical name, and manufacturer of each substance involved;

(3) Whether the substance or its container or the source of the physical agent has a warning label; and

(4) The physical form of the substance or physical agent, number of people exposed, length of exposure (hours per day), and occupations of exposed employees.

NOTE: NIOSH has developed two forms entitled "Request for Health Hazard Evaluation" and "Request for Mining Health Hazard Evaluation" to assist persons in requesting evaluations. The forms are available upon request from the offices listed in § 85.3(a) (1) and (2) or from the Regional Consultant for Occupational Safety and Health in any Regional Office of the Department of Health and Human Services.

[45 FR 2653, Jan. 14, 1980]

§ 85.4 Acting on requests.

(a) Upon receipt of a request for health hazard evaluation submitted under this part, NIOSH will determine whether or not there is reasonable cause to justify conducting an investigation.

(b) If NIOSH determines that an investigation is justified, a NIOSH officer will inspect the place of employment, collect samples where appropriate, and perform tests necessary to the conduct of a health hazard evaluation, including medical examinations of employees.

(c) If NIOSH determines that an investigation is not justified, the requester will be notified in writing of the decision.

[45 FR 2653, Jan. 14, 1980]

§ 85.5 Authority for investigations.

(a) NIOSH officers who have been issued official NIOSH credentials (Form No. CDC/NIOSH 2.93) are authorized by the Director, NIOSH, under sections 20(a) (6) and 8 of the OSH Act and sections 501(a)(11) and 103 of the FMSH Act: To enter without delay any place of employment for the purpose of conducting investigations of all pertinent processes, conditions, structures, machines, apparatus, devices, equipment, records, and materials within the place of employment, and to conduct medical examinations, anthropometric measurements, and functional tests of employees within the place of employment as may be directly related to the specific health hazard evaluation being conducted. Investigations will be conducted in a reasonable manner, during regular working hours or at other reasonable times and within reasonable limits. In connection with any investigation, the NIOSH officers may question privately any employer, owner, operator, agent, or employee from the place of employment, and review, abstract, and duplicate records required by the Acts and regulations and any other related records.

(b) Areas under investigation which contain information classified by any agency of the United States Government in the interest of national security will be investigated only by NIOSH officers who have obtained the proper security clearance and authorization.

[45 FR 2653, Jan. 14, 1980]

§ 85.6 Advance notice of visits.

(a) Advance notice of visits to the place of employment may be given to expedite a thorough and effective investigation. Advance notice will not be given when, in the judgment of the NIOSH officer, giving such notice would adversely affect the validity and effectiveness of the investigation.

(b) Where a request in accordance with this part has been made by an authorized representative of employees, advance notice in accordance with paragraph (a) of this section will be given by NIOSH to the requester, the representative of the employees for purposes of collective bargaining if such representative is other than the requester, and to the employer.

(c) Where a request in accordance with this part has been made by any employer, advance notice will be given by NIOSH to the employer. Upon the request of the employer, NIOSH will inform the authorized representative of employees of the visit: *Provided*, The employer furnishes NIOSH in writing with the identity of such representative and with such information as is necessary to enable NIOSH promptly to inform such representative of the visit.

§ 85.7 Conduct of investigations.

(a) Prior to beginning an investigation, NIOSH officers shall present their credentials to the owner, operator, or agent in charge at the place of employment, explain the nature, purpose, and scope of the investigation and the records specified in § 85.5 which they wish to review. Where the investigation is the result of a request submitted by an authorized representative of employees, a copy of the request shall be provided to the employer, except where the requester or any person authorizing the requester pursuant to § 85.3-1(e)(2) has indicated that NIOSH not reveal his name to the employer, in which case a summary of the basis for the request shall be provided to the employer.

(b) At the commencement of an investigation, the employer should precisely identify information which can be obtained in the workplace or workplaces to be inspected as trade secrets. If the NIOSH officer has no clear reason to question such identification, such information shall not be disclosed except in accordance with the provisions of section 20(a)(6) and section 15 of the OSH Act or section 501(a)(11) of the FMSH Act. However, if NIOSH at any time questions such identification by an employer, not less than 15 days' notice to an employer shall be given of the intention to remove the trade secret designation from such information. The employer may within that period submit a request to the Director, NIOSH, to reconsider this intention and may provide additional information in support of the trade secret designation. The Director, NIOSH, shall notify the employer in writing of the decision which will become effective no sooner than 15 days after the date of such notice.

(c) NIOSH officers are authorized to collect environmental samples and samples of substances, or measurements of physical agents to take or obtain photographs related to the purpose of the investigation, employ other reasonable investigative techniques, including medical examinations of employees with the consent of such employees, and to question privately any employer, owner, operator, agent, or employee. The employer shall have the opportunity to review photographs taken or obtained for the purpose of identifying those which contain or might reveal a trade secret.

(d) NIOSH officers shall comply with all safety and health rules and practices at the place of employment being investigated, and they shall provide and use appropriate protective clothing and equipment. In situations requiring specialized or unique types of protective equipment, such equipment shall be furnished by the employer.

(e) The conduct of investigations shall be such as to preclude unreasonable disruption of the operations of the employer's establishment.

[37 FR 23640, Nov. 7, 1972, as amended at 45 FR 2653, Jan. 14, 1980]

§ 85.8 Provision of suitable space for employee interviews and examinations; identification of employees.

An employer shall, in request of the NIOSH officer, provide suitable space, if such space is reasonably available, to NIOSH to conduct private interviews with, and examinations of, employees. NIOSH officers shall consult with the employer as to the time and place of the medical examination and shall schedule such examinations so as to avoid undue disruption of the operations of the employer's establishment. NIOSH shall conduct, and assume the medical costs of, examinations conducted under this part.

§ 85.9 Representatives of employers and employees; employee requests.

(a) NIOSH officers shall be in charge of investigations. Where the request for a health hazard evaluation has been made by an authorized representative of employees, a representative of the employer and a representative authorized by his employees who is an employee of the employer shall be given an opportunity to accompany the NIOSH officer during the initial physical inspection of any workplace for the purpose of aiding the investigation by identifying the suspected hazard. The NIOSH officer may permit additional employer representatives and such additional representatives authorized by employees to accompany him where he determines that such additional representatives will further aid the investigation. However, if in the judgment of the NIOSH officer, good cause has been shown why accompaniment by a third party who is not an employee of the employer is reasonably necessary to the conduct of an effective and thorough investigation of the workplace, such third party may accompany the NIOSH officer during the inspection: *Provided, however,* That access by such persons to areas described in paragraph (d) of this section shall be in accordance with the requirements of such provision, and access to areas described in paragraph (e) of this section shall be with the consent of the employer. A different employer and employee representative may accompany the officer during each different phase of an inspection if this will not interfere with the conduct of the investigation.

(b) NIOSH officers are authorized to resolve all disputes as to who is the representative authorized by the employer and employees for the purpose of this section. If there is no authorized representative of employees, or if the NIOSH officer is unable to determine with reasonable certainty who is such representative, he shall consult with a reasonable number of employees concerning matters directly related to the health hazard evaluation.

(c) NIOSH officers are authorized to deny the right of accompaniment under this section to any person whose conduct interferes with a fair and orderly physical inspection.

(d) With regard to information classified by an agency of the U.S. Government in the interest of national security, only persons authorized to have access to such information may accompany an officer in areas containing such information.

(e) Upon request of an employer, any representative authorized under this § 85.9 by employees in any area containing trade secrets shall be an employee in that area or an employee authorized by the employer to enter that area.

§ 85.10 Imminent dangers.

Whenever, during the course of, or as a result of, an investigation under this part, the NIOSH officer believes that there is a reasonable basis for an allegation of an imminent danger, NIOSH will immediately advise the employer and those employees who appear to be in immediate danger of such allegation and will inform appropriate representatives of the Department of Labor or the State agency designated under section 18(b) of the OSH Act.

[37 FR 23640, Nov. 7, 1972, as amended at 45 FR 2653, Jan. 14, 1980]

§ 85.11 Notification of determination to employers, affected employees and Department of Labor.

(a) Upon conclusion of an investigation, NIOSH will make a determination concerning the potentially toxic or hazardous effects of each substance or physical agent investigated as a result of the request for health hazard evaluation. At a minimum, the determination will: (1) Identify each substance or physical agent involved and describe, where appropriate, the concentrations or levels of the substance or physical agent found in the place of employment and the conditions of use, and (2) state whether each substance or physical agent has potentially toxic or hazardous effects in the concentrations or levels found, as well as the basis for the judgments.

(b) Copies of the determination will be mailed to the employer and to the authorized representatives of employees.

(c) Except as hereinafter provided, the employer shall post a copy of the determination for a period of 30 calendar days at or near the workplace(s) of affected employees. The employer shall take steps to insure that the posted determinations are not altered, defaced, or covered by other material during such period. The employer will not be required to post the determination if the employer requests that copies of the determination be mailed to affected employees and furnishes NIOSH with a list of the names and mailing addresses of the employees employed in the workplace(s) designated by the NIOSH Officer. In the latter event, NIOSH will mail such copies to affected employees at the mailing addresses provided by the employer.

(d) For purposes of this section, the term "affected employees" means those employees determined by NIOSH to be exposed to the substance(s) or physical agent(s) which is the subject of the health hazard evaluation.

(e) Copies of determinations made under the OSH Act will be forwarded to the Department of Labor and the appropriate State agency designated under section 18(b) of the OSH Act. Copies of determinations made under the FMSH Act will be forwarded to the Mine Safety and Health Administration of the Department of Labor; the Bureau of Mines, Department of the Interior; and the State agency which, in the judgment of NIOSH, would benefit the most from the information. If NIOSH determines that any substance or physical agent has potentially toxic or hazardous effects at the concentrations or levels at which it is used or found in a place of employment, and the substance or physical agent is not covered by a safety or health standard established under section 6 of the OSH Act or section 101 of the FMSH Act, NIOSH will immediately submit the determination to the Secretary of Labor, together with all pertinent criteria.

[37 FR 23640, Nov. 7, 1972, as amended at 45 FR 2653, Jan. 14, 1980]

§ 85.12 Subsequent requests for health hazard evaluations.

If a request is received for a health hazard evaluation in a place of employment in which an evaluation under this part was made previously, NIOSH may make another investigation if, as a result of the passage of time or additional information, another investigation would be consistent with the purposes of the Acts.

[45 FR 2654, Jan. 14, 1980]

U.S. DEPARTMENT OF HEALTH AND HUMAN SERVICES
NATIONAL INSTITUTE FOR OCCUPATIONAL SAFETY AND HEALTH

REQUEST FOR HEALTH HAZARD EVALUATION

This form is provided to assist in registering a request for a health hazard evaluation with the U.S. Department of Health and Human Services as provided in Section 20(a)(6) of the Occupational Safety and Health Act of 1970 and 42 CFR Part 85. (See Statement of Authority on Reverse Side.)

Establishment Where Possible Hazard/Problem Exists ____________________

Address
Street ____________________ Telephone __________
City ____________________ State __________ Zip Code __________

---

1. Specify the particular building or worksite where the possible hazard/problem is located.

____

2. Specify the name, title, and phone number of the employer's agent(s) in charge.

____

3. What Product or Service does the Establishment Produce?

____

4. Describe briefly the possible hazard/problem which exists by completing the following:

Identification of Toxic Substance(s) ____________________

Trade Name(s) (If Applicable) __________ Chemical Name(s) __________

____

____

Manufacturer(s) ____________________

Does the material have a warning label? ____ Yes ____ No. If yes; attach copy of label or a copy of the information contained on the label.

Physical Form of Substance(s): ☐ Dust ☐ Gas ☐ Liquid ☐ Mist ☐ Other

How are you exposed? ☐ Breathing ☐ Swallowing ☐ Skin Contact

Number of People Exposed __________ Length of Exposure (Hours/Day) __________

Occupations of Exposed Employees ____________________

____

5. Using the space below describe further the nature of the conditions or circumstances which prompted this request and other relevant aspects which you may consider important, such as the nature of the illness or symptoms of exposure, the concern for the potentially toxic effects of a new chemical substance introduced into the workplace, etc. __________

____

____

____

OMB No. 0920-010,
Expires 5/31/86

6. (a) To your knowledge has this substance been considered previously by any Government agency? _______ (b) If so, gove the name and address of each. ____________________

____

____

(c) and, the approximate date it was so considered. ____________________

7. (a) Is a similar request currently being filed with or under investigation by any other Government (State or Federal) agency? _______ (b) If so, give the name and address of each _____

____

8. Requester –
The undersigned Requester believes that a substance (or substances) normally found in the place of employment may have potentially toxic effects in the concentrations used or found.

☐ I am an Employer Representative

☐ I am an Authorized Representative of, or an officer of the organization representing the employees for purposes of collective bargaining. State the name and address of your organization. ______________________________

____

☐ I am an employee of the employer and an Authorized Representative of two or more employees in the workplace where the substance is normally found. Signatures of authorizing employees are below:

Name ______________________________ Phone ______________

Name ______________________________ Phone ______________

☐ I am one of three or less employees in the workplace where the substance is normally found.

Please indicate your desire: ☐ I do not want my name revealed to the employer.

☐ My name may be revealed to the employer.

Authority:
Section 20(a)(6) of the Occupational Safety and Health Act, (29 U. S. C. 669(a)(6)) provides as follows: The Secretary of Health and Human Services shall . . . determine following a written request by any employer or authorized representative of employees, specifying with reasonable particularity the grounds on which the request is made, whether any substance normally found in the place of employment has potentially toxic effects in such concentrations as used or found; and shall submit such determination both to employers and affected employees as soon as possible. If the Secretary of Health and Human Services determines that any substance is potentially toxic at the concentrations in which it is used or found in a place of employment, and such substance is not covered by an occupational safety or health standard promulgated under section 6, the Secretary of Health and Human Services shall immediately submit such determination to the Secretary of Labor, together with all pertinent criteria.

APPENDIX IV

RTECS COMPUTER TAPE

The 1984 Edition of the NIOSH Registry of Toxic Effects of Chemical Substances (RTECS) is now available on computer magnetic tape. The 1984 RTECS tape, which supersedes the 1983 Edition, contains 72,586 substance entries. These correspond to the substances listed in the January 1985 RTECS quarterly microfiche issue.

The tape contains two files: (1) RTECS data records and (2) CODEN bibliographic references. Complete documentation, including a description of all file layouts and data fields, is provided in the User's Guide. Characteristics of the tape are as follows: 2 reels; 9 track; 6250 BPI; EBCDIC character code (upper and lower case); odd parity; 107-character fixed-length records.

Both the tape and the file documentation are available only from:

National Technical Information Service (NTIS)
5285 Port Royal Road
Springfield, Virginia 22161
Telephone: (703) 487-4650

Stock numbers and domestic prices are listed below. If you do not have a deposit account with NTIS, payment must accompany your order. Non-U.S. customers should contact NTIS for foreign prices and purchasing instructions before ordering.

NTIS Stock No.	Title	Price
PB85 179943	1984 Edition-Registry of Toxic Effects of Chemical Substances, Computer Tape	$275.00
PB85 179935	1984 Edition-Registry of Toxic Effects of Chemical Substances, User's Guide to the RTECS Computer Tape	$11.95 (paper) $5.95 (microfiche)

BEST COPY

APPENDIX V

RTECS ON-LINE DATA BASE

The NIOSH Registry of Toxic Effects of Chemical Substances (RTECS) is now available as a real-time, interactive computer data base from three different sources: (1) the National Library of Medicine (NLM) Medical Literature Analysis and Retrieval System (MEDLARS), (2) Fein-Marquardt Company, and (3) Information Consultants, Incorporated (ICIS). The last two mentioned are vendors of The Chemical Information System. These systems permit the user to search the RTECS file for specific data or subsets of data and to compile RTECS subfiles tailored to his particular needs. Updates to these systems are provided on a quarterly basis.

National Library of Medicine MEDLARS

MEDLARS is NLM's computerized literature retrieval service, which is available through a nationwide network of more than 1300 NLM on-line centers. The MEDLARS RTECS file is accessed like other NLM files (such as TOXLINE and MEDLINE) and is available as a standard service to all NLM on-line service subscribers. The RTECS data fields are structured in the same format as they appear in the printed and microfiche Registry. RTECS records can be searched on a given route, species, toxic dose type, toxic effect, etc., and can be retrieved by entering the desired free text terms or specific toxic effects. Chemical substances can be entered by their names, RTECS accession numbers, or Chemical Abstracts Service (CAS) registry numbers. Terms may be entered singly or combined using AND, OR, and AND NOT. One can generate subfiles of compounds with similar attributes--for example, all substances with oral-rat LDLo toxicity data or all substances for which IARC monographs have been issued. Records can be printed on-line at the user's terminal, or off-line and mailed to the user from NLM. For additional information on how to interrogate the MEDLARS RTECS file, contact:

RTECS
Toxicology Information Program
Specialized Information Services
National Library of Medicine
8600 Rockville Pike
Bethesda, Maryland 20209
Telephone: (301) 496-1131

THE CHEMICAL INFORMATION SYSTEM

The CIS consists of a collection of chemical data bases available commercially. The RTECS component of CIS, available on-line through the Chemical Information Systems, Inc., is updated quarterly. Twenty-three data fields are available for searching. One can search for toxicity, teratogen, and tumorigen data by specifying the test species, route of administration, type of dose, and the dose amount over a selected numerical range. Primary irritation data can be searched by specifying the test species and the tissue upon which the test was conducted. Free text searching of the description of toxic effects and Department of Transportation standards may be performed as well as specific journal references. Using SANSS, one can specify an actual chemical structure or substructure or its name and generate a list of all compounds in the RTECS file which contain that feature. Data may be displayed in an abbreviated format similar to that used in the NIOSH publication or in an expanded format.

The CIS may be accessed through either of two vendors:

Fein-Marquardt Co.
7215 York Road
Baltimore, Maryland 21212

Telephone (Toll Free) (800) CIS-USER
(in Maryland) (301) 321-8440

or

Information Consultants, Inc. (ICI)
1133 15th Street, NW
Washington, D.C. 20005

Telephone: (202) 822-5200

2047

APPENDIX VI

RTECS MICROFICHE

The NIOSH Registry of Toxic Effects of Chemical Substances (RTECS) is available in microfiche format. This microfiche edition, which is provided quarterly, currently consists of 78 fiche (48:1 reduction ratio). Each fiche set includes the Introduction, Appendixes, file statistics, CODEN bibliographic references, CAS number - RTECS accession number index, and the complete RTECS data file. The 72,586 substances listed in the January 1985 quarterly microfiche issue correspond to the substances contained in the 1981-82 printed Registry, and this 1983-84 Cumulative Supplement.

Microfiche represent an extremely compact method of data storage, and one that economically permits our updating and supplying the file on a quarterly basis. This is especially valuable to those who wish to maintain current RTECS toxicity data, since our current growth rate is approximately 1500 new substances per quarter. In addition, new data lines are continually being added to previously listed substances. Each quarterly update contains the complete RTECS data file as of the date of publication so that prior issues need not be retained, except for historical purposes. Furthermore, all new substances added to the Registry since the previous update are highlighted to allow their immediate identification.

A subscription to the quarterly microfiche version of the Registry is available only from the Superintendent of Documents, U.S. Government Printing Office (GPO), Washington, D.C. 20402. As of January 1983, the domestic cost is $41.00 per year for a series of four issues dated January, April, July, and October. (NOTE: The cost to non-U.S. customers is $51.25 per year, which includes a 25% special handling charge for orders mailed outside of the United States.) The four issues that you receive will commence with the most current quarterly revision; back issues will not be provided. Note that the RTECS quarterly microfiche has no GPO Stock Number. Instead, when ordering this microfiche subscription from GPO, you should specify "Subscription to Microfiche Edition, Registry of Toxic Effects of Chemical Substances." Payment to GPO must be made in one of the following three ways: (1) enclose remittance with your order (make checks payable to the Superintendent of Documents), (2) charge to your GPO deposit account, or (3) charge to your VISA or Master Card account (for additional information telephone (202) 783-3238).

*U.S. GOVERNMENT PRINTING OFFICE: 1985-[illegible]

asn—Aspergillus nidulans
ast—Ascites tumor
bcs—Bacillus subtilis
bfa—body fluid assay
bmr—bone marrow
brd—bird (domestic or lab)
bwd—wild bird species
C—continuous
cat—cat
cc—cubic centimeter
chd—child
ckn—chicken
CL—ceiling concentration
clr—Chlamydomonas reinhardi
ctl—cattle
D—day
dck—duck
DEF—definition
dlt—dominant lethal test
dmg—Drosophila melanogaster
dnd—DNA damage
dni—DNA inhibition
dnr—DNA repair
dns—unscheduled DNA synthesis
dog—dog
dom—domestic animal (goat, sheep)
DOT—Department of Transportation
dpo—Drosophila pseudo-obscura
emb—embryo
EPA—Environmental Protection Agency
esc—Escherichia coli
eug—Euglena gracilis
eye—administration into eye (irritant)
fb—fiber
fbr—fibroblast
frg—frog
gm—gram
gpg—guinea pig
grb—gerbil
H—hour
ham—hamster
hla—HeLa cell
hma—host-mediated assay
hmi—Haemophilus influenzae
hmn—human
hor—horse, donkey
I—intermittent
ial—intraaural
IARC—International Agency for Research on Cancer
iat—intraarterial
ice—intracerebral
icv—intracervical
idr—intradermal
idu—intraduodenal
ihl—inhalation
imm—immersion
imp—implant
ims—intramuscular
inf—infant
ipc—intraplacental
ipl—intrapleural
ipr—intraperitoneal
irn—intrarenal
isp—intraspinal
itr—intratracheal
itt—intratesticular
iut—intrauterine
ivg—intravaginal
ivn—intravenous
kdy—kidney
kg—kilogram
klp—Klebsiella pneumoniae
L—liter
LC50—lethal concentration 50 percent kill
LCLo—lowest published lethal concentration
LD50—lethal dose 50 percent kill
LDLo—lowest published lethal dose
leu—leukocyte
lng—lung
lvr—liver
lym—lymphocyte
M—minute
m3—cubic meter
mam—mammal (species unspecified)
man—man
mg—milligram (one thousandth of a gram, 10^{-3} gram
MGN—multigeneration
mky—monkey
ml—milliliter
MLD—mild irritation effects
mma—microsomal mutagenicity assay
mmo—mutation in microorganisms
mmol—millimole
mmr—mammary gland
mnt—micronucleus test
MOD—moderate irritation effects
mol—mole
mppcf—million particles per cubic foot
mrc—gene conversion and mitotic recombination
msc—mutation in mammalian somatic cells
mul—multiple routes
mus—mouse
ng—nanogram (one billionth of a gram, 10^{-9} gram)
nml—non-mammalian species
nmol—nanomole
nsc—Neurospora crassa
nse—non-standard exposure
OBS—obsolete (trade name)
ocu—ocular
ofs—other fish
omi—other microorganisms
oms—other mutation test systems
oin—other insects
open—open irritation test
orl—oral
ORM—Other Regulated Material (DOT)
OSHA—Occupational Safety and Health Administration
oth—other cell types
otr—oncogenic transformation
ovr—ovary
par—parenteral
pg—picogram (one trillionth of a gram 10^{-12} gram)
pgn—pigeon
pic—phage inhibition capacity
pig—pig
Pk—peak concentration
pmol—picomole
post—after birth
ppb—parts per billion (v/v)
pph—parts per hundred (v/v) (percent)
ppm—parts per million (v/v)
ppt—parts per trillion (v/v)
pre—prior to mating
preg—pregnant
qal—quail
rat—rat
rbt—rabbit
rec—rectal
recm std—NIOSH recommended standard
rns—rinsed with water
S—second
sal—salmon
sat—Salmonella typhimurium
sce—sister chromatid exchange
SCP—Standards Completion Program
scu—subcutaneous
SEV—severe irritation effects
skn—administration onto skin
sln—sex chromosome loss and nondisjunction
slt—specivfic locus test
slw—silkworm
smc—Saccharomyces cerevisiae
spm—sperm morphology
spr—sperm
sql—squirrel
srm—Serratia marcescens
ssp—Schizosaccaromyces pombe
STEL—short term exposure limit
TC—toxic concentration
TCLo—lowest published toxic concentration
TD—toxic dose
TDLo—lowest published toxic dose
tes—testis
TLV—Threshold Limit Value
tod—toad
trk—turkey
trn—heritable translocation test
TWA—time-weighted average
ug—microgram (one millionth of a gram, 10^{-6} gram)
umol—micromole
unk—unreported
W—week
wmn—woman
Y—year
%—percent

THIS PUBLICATION IS A CUMULATIVE SUPPLEMENT TO THE 1981-82 EDITION OF THE REGISTRY OF TOXIC EFFECTS OF CHEMICAL SUBSTANCES (RTECS)

The Registry is not a static collection of data. It undergoes constant change as both new substances and new data for listed substances are entered. The Registry's quality control program verifies and corrects cited data, resulting in the modification or deletion of individual data lines or entire substance entries.

This edition is a cumulative supplement to the last full printed edition of RTECS (1981-82). It contains substances added to the file and substances for which changes were made in the data between January 1983 and January 1985. Since this edition is a cumulative supplement, the data from the 1983 Supplement is included; however, the 1981-82 Edition of RTECS must still be used if access to the full Registry is needed.

Because the complete Registry is no longer published annually in book form, the most current versions of the RTECS file remain the on-line data base (available through both the National Library of Medicine—MEDLARS—and the Chemical Information System—CIS) and the latest quarterly microfiche issue. Appendix V contains information about subscribing to and interrogating the computerized system; Appendix VI information on subscribing to the microfiche edition.
